

## SourceOffSite

### *What is it?*

SourceOffSite is a remote-access solution for Microsoft Visual SourceSafe, providing fast, secure access to your VSS data over any Internet connection.

### *What are the features and benefits?*

**Visual Studio integration.** SourceOffSite works within Visual Studio .NET, just like SourceSafe.

**Fast.** SourceOffSite can be 10X faster than using VSS over RAS.

**Secure.** 128-bit cryptography is built-in, eliminating the hassle of a VPN.

**Cross-platform.** The SourceOffSite client is available for Unix systems.

**Easy.** The SourceOffSite client supports all major SourceSafe features and is designed to be familiar and friendly.

**File status.** Shows you at a glance the status of your local tree with respect to the current contents of the SourceSafe database.

**Merge on Get.** SourceOffSite supports "Merge on Get", which is safer and more predictable than "Merge on Checkin".

**Windows Server 2003.** With version 4.0, the SourceOffSite server has been ported from Java to C# and is now fully compatible with Windows Server 2003.

### *What is the current version?*

SourceOffSite 4.2 was released in September 2006.

### *How much does it cost?*

- \$239/user (one named user account on one server)
- Volume discounts may apply

### *Who is SourceGear?*

SourceGear has been offering developer tools for the Visual Studio world since 1997. In 2002, we were named #156 on the Inc 500, an annual list of the fastest growing private companies in America, published by Inc Magazine.
