### XLsoft Announces Reseller Partnership with LocalStack.

---

- XLsoft Corporation (Irvine, California) has announced a reseller partnership with LocalStack on July 1, 2026. They are a Swiss-based company and a leading provider of cloud development environment emulation solutions.

Through this partnership, XLsoft has begun offering LocalStack for AWS to customers globally in Japan, APAC, and the U.S. Following LocalStack's transition to a paid commercial licensing model for enterprise users in April 2026, XLsoft enables enterprise organizations to procure LocalStack through local invoicing, purchasing, and support channels in their respective regions and countries.

- **A Word from the Developer:**

"We are excited to partner with XLsoft as an authorized reseller of our platform. As organizations increasingly adopt cloud-native development practices, the ability to locally emulate AWS services has become essential for improving developer productivity, reducing cloud costs, and enabling faster, more reliable testing. We are confident that XLsoft's expertise and customer reach will help more organizations benefit from these capabilities, and we look forward to a successful partnership, growing together while expanding opportunities and delivering greater value to customers across the region."

— Waldemar Hummer, Co-Founder & CTO, LocalStack

- **Product Name:**

LocalStack for AWS

- **Product Category:**

Cloud

## ■ **Product Overview:**

LocalStack for AWS is a solution that replicates key AWS services in a local environment, allowing developers to develop and test applications in a state as close as possible to a real cloud environment. It enables safe, rapid development and verification without requiring access to an AWS account or a real cloud environment.

This allows enterprise development teams to gain the following benefits:

- Build development and test environments while keeping AWS usage costs down
- Improve development speed by reducing wait times for cloud environment setup
- Improve quality through integration with CI/CD pipelines
- Continuous verification in a secure local environment
- Realization of a self-service environment that developers can freely use

In recent years, with the spread of cloud-native development and DevOps, the need for a rapid, efficient development environment setup has grown. LocalStack enables both an improved developer experience and reduced cloud costs by faithfully reproducing AWS services locally.

## ■ **Pricing:**

LocalStack for AWS licenses are available in Base, Ultimate, and Enterprise tiers, depending on company size, number of users, and services used.

For pricing details and product information, please contact us via our website.
